5V/2.4A 150KHz 40V Buck DC to DC Converter For USB Interface   XL2012

Features

- Wide 8V to 40V input voltage range
- Fixed 5V output voltage
- Maximum 2.4A output current
- Fixed 150KHz switching frequency
- Internal optimize power MOSFET
- High efficiency up to 92%
- Built in output short shutdown function
- Excellent line and load regulation
- Built in thermal shutdown function
- Built in current limit function
- Available in SOP8 package

Applications

- Car Charger
- Battery Charger
- USB Power Supply

General Description

The XL2012 is a 150 KHz fixed frequency PWM buck (step−down) DC/DC converter, capable of driving a 2.4A load with high efficiency, low ripple and excellent line and load regulation. Requiring a minimum number of external components, the regulator is simple to use and include internal frequency compensation and a fixed−frequency oscillator.

The XL2012 built in output short protection function. When short protection function happens, the chip will be shutdown. An internal compensation block is built in to minimize external component count.

Pin Configurations

Table 1 Pin Description

Pin Number	Pin Name	Description
1	FB	Feedback Pin (FB). The feedback threshold voltage is 5V.
2	NC	No Connected.
3	VC	Internal Voltage Regulator Bypass Capacitor Pin (VC). The VC pin connect a 1uf capacitor to VIN.
4	VIN	Supply Voltage Input Pin. XL2012 operates from 8V to 40V DC voltage. Bypass Vin to GND with a suitably large capacitor to eliminate noise on the input.
5,6	SW	Power Switch Output Pin (SW). SW is the switch node that supplies power to the output.
7,8	GND	Ground Pin. Care must be taken in layout. This pin should be placed outside of the schottky diode to output capacitor ground path to prevent switching current spikes from inducing voltage noise into XL2012.

Note1: Stresses greater than those listed under Maximum Ratings may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operation is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

Output short shutdown function description

The output short shutdown function is built in XL2012. The short protection circuit monitors the output voltage, whenever FB pin voltage is below 1.5V, the short circuit protection circuit is triggered, the converter will be shutdown, input current less than 5mA.

When the short fault is removed，if output load is floating, then converter will restart up, the output voltage will return to normal; if output load isn't floating, then converter must be power reset , the output voltage will comeback.
