

Dual Channel Hall-effect Switch with Speed and Direction Outputs

FEATURES

- Precisely aligned dual Hall elements
- Logic output signals for quadrature A/B outputs
- Logic output signals for direction
- Superior temperature stability and industry-leading
- jitter performance through use of advanced chopper
- stabilization topology
- High sensitivity (B_{OP} and B_{RP})
- Supports a wide voltage range: 3.0 to 24 V
- Solid-state reliability
- Small package sizes

APPLICATIONS

- Magnetic encoding
- Rotating shaft monitoring
- Garage door openers
- Power sliding doors
- Sunroofs motor

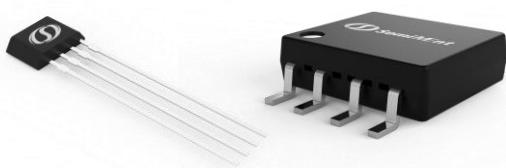

DESCRIPTION

The SC2526H is a dual-channel Hall-effect sensor IC ideal for use in speed and direction sensing applications incorporating encode ring-magnet targets. The SC2526H provides various output signals that indicate speed and direction of target rotations. The Hall elements are both photos lithographically aligned to better than 1um. Maintaining accurate displacement between the two active Hall elements eliminates the major manufacturing hurdle encountered in fine-pitch detection applications. The SC2526H is a sensitive, temperature-stable magnetic device ideal for use in harsh automotive and industrial environments.

The Hall elements of the SC2526H are spaced 1.4mm apart, which provides excellent speed and direction information for small-geometry targets. Extremely low-drift amplifiers guarantee symmetry between the switches to maintain signal quadrature. An on-chip regulator allows the use of this device over a wide operating voltage range of 3.0 to 24V

The digital outputs are out of phase so that the outputs are in quadrature when interfaced with the proper ring magnet design. For the direction signal to be updated, a quadrature relationship must be maintained.

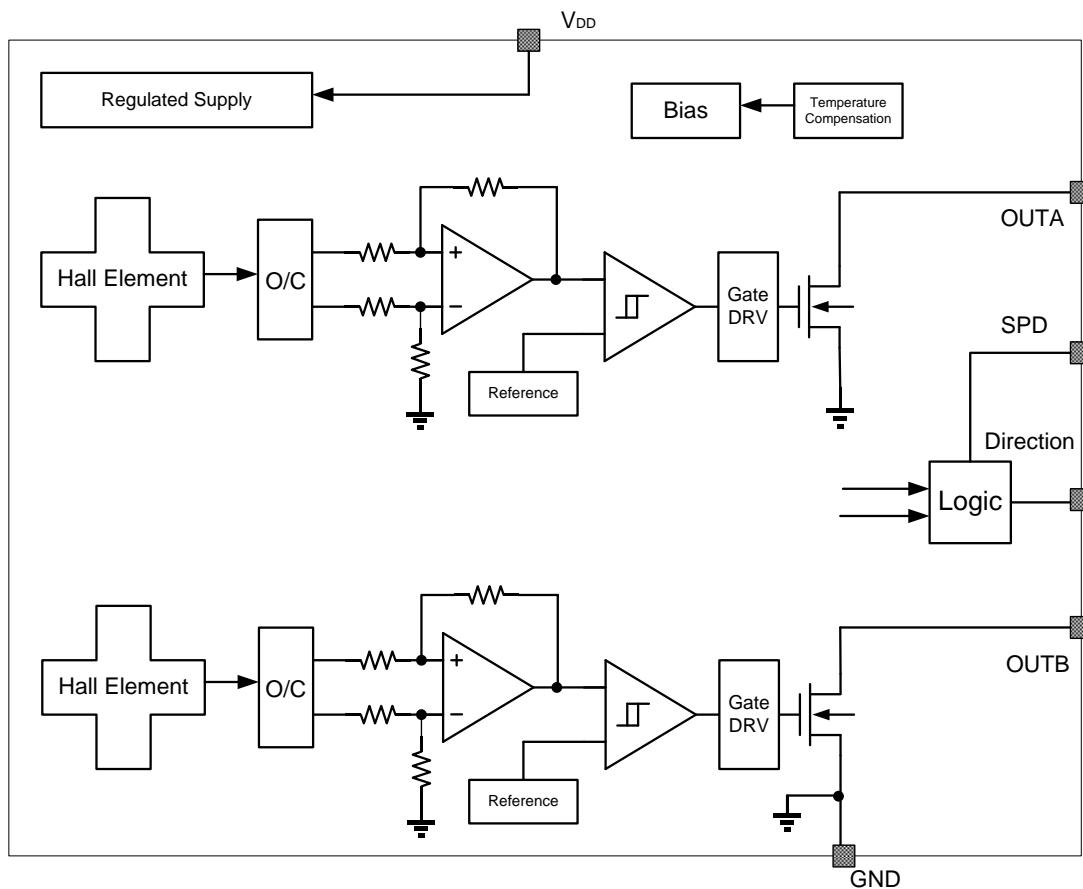

The SC2526H is available in a 4-pin SIP and a plastic 8-pin SOIC surface mount package. Both packages are lead (Pb) free, with 100% matte tin lead frame plating.

ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature range

Parameter	Symbol	Min.	Max.	Units
Power supply voltage	V _{DD}	-0.5	28	V
Output terminal voltage	V _{OUT}	-0.5	28	V
Output terminal current sink	I _{SINK}	0	15	mA
Operating ambient temperature	T _A	-40	150	°C
Maximum junction temperature	T _J	-55	165	°C
Storage temperature	T _{STG}	-65	175	°C

Note: Stresses above those listed here may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ESD PROTECTION
